Accu-Flow Automatic NH₃ Control System

Trust your systems to Raven. The Raven Accu-Flow system provides the precision application of NH₃ and the versatility your operation needs. Use the Accu-Flow System with Raven's complete line of automatic rate control consoles and have the confidence that your NH₃ is being applied accurately regardless of speed or field conditions. Choose the Accu-Flow Dual Valve system for ultimate accuracy in NH₃ Application.

- Extremely accurate day in and day out over a wide range of application rates
- 20 GPM or 30 GPM super cooler
- Apply in gallons per acre or actual pounds of NH₃ per acre
- Cooler can be disassembled for easy cleaning and preventative maintenance
- Single Valve, Dual Valve, and Space Saver plumbing kits available

Accu-Flow Dual Valve System

SCS4000 Series Console

Control up to three products at once - liquid, dry, NH₃ or injection - with this versatile console. The SCS 4000 Series is GPS-ready, accommodates up to 10 booms, and installs with simple in-cab wiring. CANbus technology allows for simple product upgrades.

SCS440

Provides a variety of data including tank volume, total and field area covered, total and field volume applied, vehicle speed, area covered per hour, and volume per minute of the system. GPS compatible for data logging and variable rate applications.

VIPER Precision Farming System

Controls all field applications with VIPER's easy-to-use, 10.5-inch color touch screen system. Benefits include on-screen steering indicators, data logging, single or multi-product VRA, applied maps and application reports.

SCS Sidekick

Don't forget about the easy-to-use Raven SCS-Sidekick for your N-Serve injection needs. Injecting N-Serve is a simple way to stabilize nitrogen and expand the application window. The SCS-Sidekick makes accurate N-Serve injection simple, safe and economical.
