AIRVAXX

Ongoing Safety and Reliability

- 6 x 4 Cab Chassis
- Single Crew member operation
- 30 degree tipping angle
- Built to AS1210
- Hazard Level E, AS4343

The AirVAXX R10-1500EU Hydro-Excavation Unit is a non-destructive digging and general waste recovery vehicle designed for single crew member operation.

Standard features include an 8KL waste storage vessel and 2KL water compartment with a 6mm shell thickness.

The unit is also equipped with a full opening rear door and tipping system which are both hydraulically controlled.

These tankers are fitted with a 1500 CFM filtration and pumping system as well as a suction loading boom.

Optional features include an emergency shutdown (ESD) system which when activated results in the closing of any actuated vessel valves, shutdown of the pumping system and high pressure water system.

All of our tankers can be customised to suit your specific needs. Give us a call to get your next project started!
