AIRVAXX

Ongoing Safety and Reliability

- 6 x 4 Cab Chassis
- Single Crew member operation
- 15 degree tipping angle
- Built to AS1210
- Hazard Level B, AS4343

The AirVAXX RT11.5 Rigid Waste Tanker is a commercial waste recovery vehicle designed for one crew member operation.

Standard features include an 11.5 kL storage vessel, liquid ring pumping system and high pressure water system.

The unit has a hydraulically controlled full opening rear door and tipping system, including tipper locking pins.

These tankers are equipped with a hydraulic safety lockout system as well as rear door and vessel body safety props.

Optional features include an emergency shutdown (ESD) system which when activated results in the closing of any actuated vessel valves, causing the shutdown of the pumping system and high-pressure water system.

We offer numerous options and all of our tankers can be customised to suit your specific needs. Give us a call to get your next project started!
