AIRVAXX

Ongoing Safety and Reliability

- Single Crew member operation
- Approved to load, transport and discharge DG Waste Liquids Classes 3, 5.1, 6 and 8
- Built to AS1210
- Hazard Level B, AS4343

The AirVAXX R02.5-C is a purpose built dangerous goods (DG) spillage recovery vehicle made for airport use.

The unit has a 2500 litre combination vacuum/pressure vessel with a 1250 litre general waste compartment and 1250 litre DG compartment.

Standard features include a liquid ring pumping system and detergent system with high pressure water.

This unit is also fitted with a 12 metre hose and handheld vacuum wands for tarmac clean up.

Optional features this unit is equipped with include remote control operation and the AirVAXX Vacuum Pump Odour Control Unit which works to eliminate the smell of vacuum pump exhaust.

The unit features electronic liquid level indicators a wash down hose, and toolbox with ample storage space.

The unit is approved to load, transport and discharge DG Waste Liquids Classes 3, 5.1, 6 and 8, with other classes available on request.

We offer numerous options and all of our tankers can be customised to suit your specific needs. Give us a call to get your next project started!
